

DIGITAL WORK PERMIT SYSTEM – USER TRAINING WITH WORKFLOW AND DASHBOARD OVERVIEW

Introduction and Training Objectives

Purpose of the Digital Work Permit System and Training Goals

SAFE SYSTEM OF WORK (SSOW) Development and Implementation

Digital Workflow Efficiency

The system replaces paper permits with a transparent, easy-to-use digital process ensuring accountability and traceability.

User-Friendly Training

Training is designed for users with no prior knowledge, using simple language and clear examples to build confidence.

Safety and Compliance Focus

The system emphasizes hazard identification, safety checks, and regulatory compliance to avoid unsafe conditions.

Real-Time Visibility

Dashboards provide real-time permit tracking and approval status for effective communication across roles.

SYSTEM OVERVIEW AND USER ROLES

Understanding the System Structure and Key User Roles

Role-Based Workflow

The system employs sequential user roles to ensure orderly permit processing and safety compliance.

Requestor Responsibilities

Requestors initiate permits by inputting job details guided by simple language without technical expertise.

Review and Approval Roles

Issuers validate work requests, HSE reviewers ensure safety controls, and Approvers give final authorization.

Accountability and Audit Trail

Each user action is logged with timestamps and comments, creating a reliable audit trail for accountability.

Raises Permit

Step-by-Step Digital Permit Flow from Request to Approval

Permit Request Initiation

The Requestor enters job details, location, and timing to create a new permit request digitally.

Review and Approval Stages

The Issuer, HSE Reviewer, and Approver sequentially review and approve permits ensuring safety and compliance.

Automated Notifications and Tracking

System generates official permit document and notifies parties, enabling real-time status tracking.

Benefits of Digital Workflow

Automated digital flow reduces delays, prevents unauthorized work, and ensures consistent safety checks.

CREATING A NEW PERMIT REQUEST

Entering Job Details and General Information

Basic Job Information

Users input straightforward job details like contractor name, work location, and task description to start the permit process clearly.

Date and Time Scheduling

Date and time fields specify when the work will occur, supporting planning and safety coordination.

Validation and Guidance

The system validates required fields and guides users with visual separators, ensuring complete and consistent information.

Improved Review Process

Standardized input reduces back-and-forth communication and streamlines permit approvals and downstream reviews.

Assigning the Approval Team

Selecting Issuer, HSE Reviewer, and Final Approver

11

presentation file

- Role Assignment Process
 - Requestors assign Issuer, HSE Reviewer, and Final Approver from pre-approved user lists to ensure proper governance.
- Automated Notifications
 - System automatically sends notifications to assigned roles, reducing manual communication errors and delays.
- Governance and Accountability
 - Only authorized personnel can be selected, maintaining transparency, traceability, and compliance throughout approval stages.
- Simplified Collaboration
 - Clear role definitions and automated processes streamline collaboration and ensure approval follows organizational rules.

Safety and Hazard Identification

Adding Hazards, Control Measures, and Responsibilities

13

presentation title

- Hazard Identification
 - The system requires selecting work types to automatically display relevant hazard categories, ensuring thorough risk identification.
- Defining Control Measures
 - Users specify control measures like protective gear and procedural safeguards to mitigate identified hazards effectively.
- Assigning Responsibilities
 - The system assigns responsibilities to clarify accountability for implementing safety controls during the job.
- Safety Communication and Compliance
 - Digital hazard documentation enhances communication, compliance, and fosters a safety-first mindset among users.

SUBMITTING AND TRACKING THE PERMIT

Submission Process and Status Updates

Automated Submission and Notifications

The system automatically updates permit status and notifies the assigned Issuer upon submission.

Real-Time Status Visibility

Users can view permit status at any time with clear labels and color indicators for easy progress tracking.

Centralized Communication and Comments

Reviewer comments and requests are recorded in the system, consolidating all communication in one place.

Improved Accountability and Audit Trail

Structured tracking reduces delays, improves accountability, and provides clear audit trails for permits.

APPROVAL PROCESS AND FINAL OUTPUT

Multi-Level Approval and PDF Generation

Structured Approval Workflow

The system enforces a strict sequence to ensure permits are reviewed in the correct order.

Approver Dashboard Features

Reviewers can view permit details, add comments, and approve or reject requests within the dashboard.

Automated PDF Permit Generation

Upon final approval, the system generates a formal PDF permit with digital signatures and timestamps.

Benefits of Automation

Automation reduces workload and ensures consistent, professional, and legally credible permit documentation.

DASHBOARD AND MONITORING

Hazards & Controls

Permit Type: Hot Work

Hazard 1: Fire / Explosion due to flammable materials

Control: Remove combustibles, maintain fire watch, and keep inspected fire extinguishers nearby

Hazard 2: Burn injuries from sparks, slag, or hot surfaces

Control: Wear flame-resistant clothing, gloves, face shield, and proper PPE

Hazard 3: Toxic fumes and gases inhalation

Control: Ensure adequate ventilation or local exhaust and use respiratory protection if required

Checkpoints Validated

Permit Type: Hot Work

1. Validated that work area is clean of all combustibles

Response: Yes

2. Dedicated Fire Watch with extinguisher is present

Response: Yes

3. Work area has been gas-tested and barricaded

Response: Yes

Using Dashboards for Real-Time Visibility

Centralized Permit Monitoring

Dashboards offer a centralized view of all permits, enabling easy monitoring of activity and performance.

Visual Data Interpretation

Charts and tables help managers quickly understand trends and identify bottlenecks effectively.

User-Friendly Interface

Intuitive visuals and filters simplify complex data, reducing the learning curve for beginners.

Enhanced Efficiency and Reporting

Real-time visibility improves decision-making, coordination, and supports audits with organized historical data.

KEY BENEFITS AND LEARNING SUMMARY

Safety, Efficiency, and Key Takeaways for New Users

Standardized Permit Process

The system reduces errors by standardizing work permit processes and ensuring proper reviews before work starts.

User-Friendly Guidance

Clear language and visual workflows help users without construction experience navigate the system easily.

Safety Culture Promotion

Hazard identification and multi-level approvals enforce a strong safety culture in work permit management.

Improved Communication & Efficiency

Automated notifications and dashboards decrease administrative load and enhance communication clarity.
